Press-announcement 14 May 2011

"Empty Room Systems", a producer of audio processing software from the Netherlands, proudly announces the release of the Dim D Chorus. This chorus is the replica of the Roland Dimension D chorus with enhanced controls.

After the release of the EMpTy 250, we decided to develop this chorus. Harrie Munnik recreated it for the Eventide H8000® in 2004 and has ported it over to PC VST format. The beta testers are raving about this new product, as THE replica of the SDD-320. Beside the sound of the SDD-320 with the 4 modes, we added the following features: an additional freq and depth knob to be able to alter the sound even more, a mix knob to be able to use the plug-in on stereo inserts and extensive VST bank support and presets. The way the knobs are controlled can also be altered to velocity sensitive and circular or horizontal/vertical linear.

The Dim D is available on the 15th of May 2011 as a PC VST plug-in. The plug-in can be used in any DAW software supporting Steinberg®'s VST-format, like for example Nuendo, Cubase and does not need any internal DSP card, external box or dongle to function. This version uses a serial number as protectionscheme.

RTAS, MAC AU and MAC VST format will be supported later this year.

Price: € 59,--. The introduction price till 15 June 2011: € 49,--
